```
Given that the content of array a (in row major order) is {1.0, 2.0, 3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, 10.0, 11.0, 12.0, 13.0, 14.0, 15.0, 16.0}, what is the content of array b for each process after executing the following code segment using 4 MPI processes?

#define SIZE 4

.....

float a[SIZE][SIZE];
int myrank, comm_sz;
float b[SIZE] = {0};

MPI_Datatype newtype;
```

```
MPI_Init(&argc, &argv);

MPI_Comm_size(MPI_COMM_WORLD, &comm_sz);

MPI_Comm_rank(MPI_COMM_WORLD, &myrank);

MPI_Type_vector(SIZE, 1, SIZE, MPI_FLOAT, &newtype);

MPI_Type_commit(&newtype);

if(myrank == 0){
    for(int i = 1; i < comm_sz; i++)

        MPI_Send(&a[0][i], 1, newtype, i, 0, MPI_COMM_WORLD);
    }

else

MPI_Recv(b, SIZE, MPI_FLOAT, 0, 0, MPI_COMM_WORLD,

MPI_STATUS_IGNORE);
......</pre>
```

### Correct!

```
Process 0: b = \{0, 0, 0, 0\}
   Process 1: b = \{2.0, 6.0, 10.0, 14.0\}
   Process 2: b = \{3.0, 7.0, 11.0, 15.0\}
Process 3: b = {4.0, 8.0, 12.0, 16.0}
   Process 0: b = \{0, 0, 0, 0\}
   Process 1: b = \{1.0, 5.0, 9.0, 13.0\}
   Process 2: b = {2.0, 6.0, 10.0, 14.0}
Process 3: (b = {3.0, 7.0, 11.0, 15.0})
   Process 0: b = \{1.0, 2.0, 3.0, 4.0\}
   Process 1: b = {5.0, 6.0, 7.0, 8.0}
   Process 2: b = \{9.0, 10.0, 11.0, 12.0\}
Process 3: b = {13.0, 14.0, 15.0, 16.0}
   Process 0: b = \{1.0, 5.0, 9.0, 13.0\}
   Process 1: (b = {2.0, 6.0, 10.0, 14.0})
   Process 2: (b = {3.0, 7.0, 11.0, 15.0})
Process 3: [b = {4.0, 8.0, 12.0, 16.0}]
```

Question 2 2 / 2 pts

```
Given that the content of array (in row major order) is \{1.0, 2.0,
3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, 10.0, 11.0, 12.0, 13.0, 14.0, 15.0,
16.0}, what is the content of array b for each process after executing
the following code segment using 4 MPI processes?
#define SIZE 4
    float a[SIZE][SIZE];
    int myrank, comm_sz;
    float b[SIZE] = {0};
    int blocklengths[SIZE], displacements[SIZE];
    MPI_Datatype newtype;
    MPI_Init(&argc, &argv);
    MPI_Comm_size(MPI_COMM_WORLD, &comm_sz);
    MPI_Comm_rank(MPI_COMM_WORLD, &myrank);
     for(int i=0; i<SIZE; i++) {</pre>
        blocklengths[i] = 1;
        displacements[i] = i*SIZE + i;
    }
    MPI_Type_indexed(SIZE, blocklengths, displacements, MPI_FLOAT,
&newtype);
    MPI_Type_commit(&newtype);
    if(myrank == 0){
         for(int i = 1; i < comm_sz; i++)</pre>
             MPI_Send(&a[0][0], 1, newtype, i, 0, MPI_COMM_WORLD);
    }
    else
        MPI Recv(b, SIZE, MPI FLOAT, 0, 0, MPI COMM WORLD,
MPI_STATUS_IGNORE);
    The content of array [b] is \{4.0, 7.0, 10.0, 13.0\} on all processes.
    The content of array \begin{bmatrix} b \end{bmatrix} is \{4.0, 8.0, 12.0, 16.0\} on all processes.
```

The content of array b is {(1.0, 5.0, 9.0, 13.0)} on all processes except on process 0.

### Correct!

The content of array **b** is {1.0, 6.0, 11.0, 16.0} on all processes except on process 0.

# Question 3 0 / 3 pts

Consider the following code fragment, in which process i,  $0 \leq i < P-1$  where P is the number of processes in the communicator, sends a message to process i+1, and process i=P-1 sends a message to process 0; furthermore, process i, 0 < i < P, also receives a message from process i-1, and process 0 receives a message from process i-1.

```
int a[10], b[10], nprocs, myrank;

MPI_Status status;

...

MPI_Comm_size(MPI_COMM_WORLD, &nprocs);

MPI_Comm_rank(MPI_COMM_WORLD, &myrank);

MPI_Send(a, 10, MPI_INT, (myrank + 1) % nprocs, 1, MPI_COMM_WORLD);

MPI_Recv(b, 10, MPI_INT, (myrank - 1 + nprocs) % nprocs, 1,

MPI_COMM_WORLD, &status);
...
```

Which of the following statements is (are) TRUE?

We can't use non-blocking send and receive functions for this case.

### orrect answer

The execution of MPI\_Send() and MPI\_Recv() in the code fragment might cause a deadlock.

### Correct!

We can rewrite this code using MPI\_Sendrecv to make the code safe.

The execution of MPI\_Send() and MPI\_Recv() in the code fragment always causes a deadlock.

The calls to (MPI\_Send()) and (MPI\_Recv()) in the code fragment will never cause a deadlock.

# Question 4

0 / 2 pts

Which of the following statements is (are) TRUE?

MPI\_Comm\_split can partition the group associated with a given communicator into overlapping subgroups.

### orrect answer

MPI\_Comm\_create must be called by all the processes associated with the communicator given in the function call.

### **Correct!**

A message sent in one context cannot be received in another context.

### u Answered

If two communicators have exactly the same group of processes, then these two communicators are identical.

## **Question 5**

2 / 2 pts

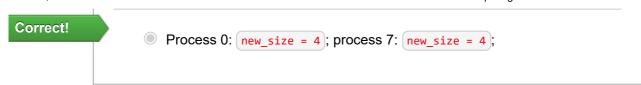

Given the following code segment,

Correct!

```
int num_procs, orig_rank, new_size, new_rank, sum = 0;
    MPI_Comm new_comm;
    MPI_Init(&argc, &argv);
    MPI_Comm_size(MPI_COMM_WORLD, &num_procs);
    MPI_Comm_rank(MPI_COMM_WORLD, &orig_rank);
    MPI_Comm_split(MPI_COMM_WORLD, orig_rank%2, 0, &new_comm);
    MPI_Comm_size(new_comm, &new_size);
    MPI_Comm_rank(new_comm, &new_rank);
    MPI_Reduce(&new_rank, &sum, 1, MPI_INT, MPI_SUM, 0, new_comm);
    . . . . . .
if the code is ran using mpiexec with option -n 8, what is the rank of
process 4 from MPI_COMM_WORLD in new_comm?
    3
    0 1
    0 4
    2
```

# Given the code segment in Question 5, what is the value of new\_size, respectively, for processes 0 and 7 in MPI\_COMM\_WORLD? Process 0: new\_size = 8; process 7: new\_size = 8; Process 0: new\_size = 2; process 7: new\_size = 2 Process 0: new\_size = 8; process 7: new\_size = 4;

	Question 7	2 / 2 pts
	Given the code segment in Question 5, how many communication there when it is executed?	ators are
	O 2	
	O 4	
Correct!	<ul><li>3</li></ul>	
	O 1	

Quiz score: 10 out of 15
